Computerized Muscle Testing - Session Report & Comparatives
MSM7000 Musculoskeletal Metrics

Patient: John Q Public
Height: 72 Inches
Weight: 180 lbs
Gender: Male
Handedness: Left
Date of Birth: 2/10/1961

A Computerized Comparative Muscle Strength Test (CCMT) procedure was performed in order to determine asymmetry in muscle strength and to quantify muscle strength loss as noted on the subjective muscle strength test. These muscle strength losses of the upper and/or lower extremities indicate neurological facilitation resulting from trauma to the cervical and/or lumbar spine.

7/13/2004, 12:05:00 PM	Lbs	Lbs	% Lt to Rt	% Improved	
	Left	Right		Left	Right
Muscle Group			Difference		
Shoulder Abductors	15	19	21%	n/a	n/a
Shoulder Flexors	16.5	18.5	11%	n/a	n/a
Shoulder Lateral Rotators	14	18	22%	n/a	n/a
Hip Flexors	35	40.5	14%	n/a	n/a
Hip Abductors	38	42	10%	n/a	n/a
10/21/2004, 5:06:00 PM	Lbs	Lbs	% Lt to Rt	% Improved	
	Left	Right		Left	Right
Muscle Group			Difference		
Shoulder Abductors	31	34	9%	107%	79%
Shoulder Flexors	32.5	35.5	8%	97%	92%
Shoulder Lateral Rotators	34.5	35	1%	146%	94%
Hip Flexors	61	62.5	2%	74%	54%
Hip Abductors	74	75.5	2%	95%	80%
